

## THE BISHOP'S SCHOOL, CAMP

### REPORT ON WORLD WATER DAY

#### CLASS VI

Water is one of the most important resources gifted to us after air. It forms the basis of life for every living organism on earth. Life without water is unimaginable and impossible. This is the sole reason why finding traces or signs of water is an important criterion of planetary exploration. Life on earth probably would not have even began if not for water.

World water Day is held annually on 22<sup>nd</sup> of March, as a means of focusing attention and create awareness on the importance of freshwater and the need to preserve this available resource.

***'Pure water is the world's first and foremost medicine.'***

World Water Day was celebrated by the Bishop's School, Camp on the 25<sup>th</sup> of March mainly by the class sixes through the students' artistic drawings and colouring.

'The central idea was the conservation of water.'

The students were allowed to let their imaginations run wild and at the same time to bring to fore their artistic talent to express their views, opinions, suggestions, and solutions on the conservation of water.

The teachers acted like guides by listing some points and ideas which helped the students to fire up their imaginations.

A large number of students participated enthusiastically and came up with creative and innovative ideas through drawings and colours. Some of the student used captions, quotes, poems and even songs to illustrate the importance of water and the need to preserve this available resource.

Overall, the goal on the conservation of water was well received and awareness to build a better heathier and greener earth was accomplished.
