

THE BISHOP'S SCHOOL, CAMP
REPORT ON VISIT TO LASHKAR PUNE WATER SUPPLY

*"If there is magic on the planet,
it is contained in water."*

-Loren Eiseley

On 25th March 2023, our school organized a field visit to Water Treatment Plant for Class 7 to celebrate World Water Day. Students reported at 8.45 a.m. to their respective class rooms.

We started our day with a prayer for God's blessings and protection. At around 9.15 a.m., students walked down to the venue along with their teachers.

At the venue, Mr. Shivam Patil gave the basic knowledge about the treatment process, where water is treated at the Water Treatment Plant to remove sediments, bacteria and other impurities.

He then gave the boys a brief explanation about the process from the first step starting from water sources, rapid mixing, pre-chlorination process, flocculation, sedimentation, filtration, disinfection and distribution.

The main purpose for this visit was to give them a practical knowledge about how raw water is treated and distributed.

Few PowerPoint presentations and videos were also displayed in class.

The visit to Lashkar Pune Water Supply was informative, enlightening and fruitful for all.

-Mrs. Nikhat Shaikh
