Report: Science Based Experiential Learning activity for Class 4

The Experiential Activity for Class 4 students was conducted on the 22nd of September 2022. The activity commenced with an air of cheer and enthusiasm as the children prepared themselves for a time of learning and fun.

The activity was based on science and the volunteer from Sakal explained to the children about the instrument called the 'Periscope' that was to be made by them. Valuable information regarding the significance, importance and the use of the instrument was shared with the children.

All the children were given a kit consisting of two mirrors, a cello tape and a periscope assembling unit. The volunteer patiently helped the children with the making of the periscope.

The children worked hard for more than an hour assembling their own periscopes and also helped each other. All in all, it was a very enjoyable time for the children wherein they learnt important science lessons through fun and activity.
