

## REPORT ON EXPERIENTIAL LEARNING ACTIVITIES FOR CLASSES I TO V - SECOND SESSION

*“For the things we have to learn before we can do them, we learn by doing them.”*

*Aristotle*

Experiential learning provides an active learning environment for students. Throughout the learning process, the students are actively engaged in posing questions, investigating, experimenting, being creative and enhancing their interest.

The ELE activities for Classes 1 to 5 was organised and executed with precision. There was a list of activities assigned for each class and the same was conducted on different days during the months of January and February. The activities were a grand success and many students participated with great enthusiasm and zeal. The process of making *a magnetic car, a kaleidoscope, a pin-hole camera*, learning how our universe functions and how the different parts of our human body work; kept the children interested and engrossed. These activities provided the students with a dimension of new experiences to learn from. They also got creative while making different art and craft items like *key chain holders, painting terracotta designs and doodling on jute bags*.

It was indeed wonderful to see the children taking the initiative to learn something new and benefitting from the platform given to them by the school.
