

**THE BISHOP'S SCHOOL CAMP
REPORT ON EXPERIENTIAL LEARNING – CLASS 6**

***“Tell me and I forget,
teach me and I remember,
involve me and I learn”***

- Benjamin Franklin

Learning by doing is the best form of learning. Experiential learning emphasizes the process of learning and not only the result. All human beings have a natural propensity to learn, and the role of the teacher is to facilitate such learning.

On 7th September an experiential learning programme was organized by **The Bishop's School Camp, Pune** for Class 6. The activity was to make a Magnetic Levitating Pencil. Magnetic Levitation is a method by which an object is suspended in the air with the support of a magnetic field. Students were provided with the kits which had all the materials required to make a magnetic levitating pencil.

Around 250 students of class 6 participated in this activity in the classroom under the guidance of the teacher and Mentor. All the students participated with zeal and made the working model of a magnetic levitating pencil.

Every student enjoyed this activity. They learned the concept of magnetic levitation and how a magnet works, they also got to know about its application which is Maglev Train.

This activity instilled a scientific temperament in the students and will encourage students to take more interest in science.
